Viral Fever & Upper Respiratory Infection Assessment

Patient presented with fever (101°F), body aches, sore throat, runny nose, and chills. Symptoms consistent with viral upper respiratory infection or influenza.

■ Main Health Concerns

Viral Fever

Moderate

Temperature of 101°F with accompanying chills and sweating, indicating the body's immune response to a viral pathogen.

Upper Respiratory Symptoms

Mild

Sore throat, runny nose, and body aches suggesting viral involvement of the upper respiratory tract.

Low Appetite & Fatigue

Mild

Reduced food intake and energy levels due to the systemic viral infection affecting metabolic function.

■ Possible Associated Conditions

◆ Viral Influenza (Flu)	◆ Common Cold
◆ Viral Pharyngitis	◆ Adenoviral Infection

■ Recommendations & Suggestions

01

Complete Bed Rest

Rest for minimum 48-72 hours. Avoid work or strenuous activity until fever-free for 24 hours.

02

Aggressive Hydration

Drink 8-10 glasses of warm fluids daily. Coconut water, warm broths, herbal teas.

03

Saline Gargle

Gargle with warm saline (1/2 tsp salt in 1 cup warm water) 3-4 times daily for sore throat relief.

04

Temperature Monitoring

Check temperature every 4-6 hours. Seek immediate medical care if fever exceeds 103°F.

Exercises, Activities & Yoga**Anulom-Vilom (Alternate Nostril Breathing)**

■ Sit comfortably. Close right nostril with thumb, inhale through left. Close left with ring finger, exhale through right. Repeat.

■ **Duration:** 5 minutes, twice daily

■ **Benefit:** Clears nasal passages, improves oxygen flow

Nadi Shodhana Pranayama

■ Same as Anulom-Vilom but with 4-count inhale, 4-count hold, 8-count exhale.

■ **Duration:** 5 minutes daily

■ **Benefit:** Reduces inflammation, calms the nervous system

Gentle Bed Stretches

■ While lying down, gently stretch arms overhead, then legs. Rotate ankles and wrists.

■ **Duration:** 10 minutes morning and evening

■ **Benefit:** Reduces body ache, improves circulation

What to Avoid**× Fried & Spicy Foods**

Increases inflammation and digestive load, worsening recovery time

× Cold Beverages & Ice Cream

Aggravates throat inflammation and congestion

× Strenuous Exercise

Diverts energy from immune response, can worsen and prolong illness

× Caffeine & Alcohol

Dehydrating effect counteracts fluid therapy and disrupts sleep

✗ Dairy Products	Can increase mucus production when congested
-------------------------	--

■ Healthy Habits to Follow

✓ Tulsi-Ginger-Honey Tea	Boil 5-6 tulsi leaves with 1/2 inch ginger in 2 cups water for 10 minutes. Add honey. Drink 2-3 times daily.
✓ Steam Inhalation	Inhale steam (plain or with eucalyptus oil) for 10 minutes twice daily to relieve congestion.
✓ Sleep 9-10 Hours	Extended sleep accelerates immune response and viral clearance significantly.
✓ Warm Compress	Apply warm damp cloth to forehead and neck for 15 minutes to help reduce fever discomfort.

■ Personalized Diet Plan

Anti-inflammatory, easy-to-digest diet focused on hydration and immune support

■ Morning	Warm water with lemon and honey • Tulsi-ginger tea • Plain idli or toast with dal
■ Mid-Morning	Coconut water • Pomegranate or apple
■ Lunch	Moong dal khichdi • Bottle gourd (lauki) sabzi • Warm water
■ Evening	Warm vegetable soup or clear broth • Herbal tea
■ Dinner	Plain rice with dal • Steamed vegetables • Small cup of warm milk with turmeric (haldi doodh)

■ Include	■ Avoid
+ Tulsi leaves	- Fried foods
+ Ginger	- Cold beverages
+ Turmeric	- Spicy curries
+ Pomegranate	- Dairy (except warm turmeric milk)

+ Coconut water	- Processed snacks
+ Moong dal	
+ Bottle gourd	

■ When to See a Doctor

■ Fever above 103°F (39.4°C) not responding to home remedies

■ Difficulty breathing or chest pain

■ Symptoms worsen significantly after day 3

■ High fever in children or elderly (immediate care)

■ Rash appears on body alongside fever
